

Lakshyawardhan Singh Rathore

lakshyarathore005@gmail.com | github.com/lakshyawardhansinghrathore1 |
www.linkedin.com/in/lakshyawardhan-singh-rathore-748316360

Skills

Languages: C/C++, Java, Python, JavaScript, TypeScript, SQL.

Technologies & Tools: AWS, EC2, DynamoDB, S3, SQS, Lambda, Athena, Elasticsearch, Spark, Hive, Presto, Kubernetes, Docker, Splunk, Kafka, Spring, Angular, ReactJS, Pandas, NodeJs, Express.

Education

VIT BHOPAL Sep 2023 - May 2027 B.Tech in Computer Science and Engineering Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Advance Data Structures and Algorithms, Information Retrieval, Image Processing.

ST ANNE'S SCHOOL JODHPUR March 2022.

Certificates

- Bit and Bytes of Computer Networking (Google)
- Introduction to Machine Learning (NPTEL)
- Introduction to Gen - AI (Google)
- Computational Data Science (Indiana University)

Work Experience

- **Open Source Contribution**, GirlScript Summer of Code (GSSOC) | May 2023 - Aug 2023 | Remote
- **Hackathon**, Smart India Hackathon | August 2024 - October 2024 | Prototype for waste Management System using IoT and Web development.

Project Work

- **Health Care Recommendation System (2024)** : Using Machine Learning Techniques to predict diseases based on patient symbol and appropriate medications.
Tools & Technologies: Python, Pandas, Scikit-learn, NumPy, Jupyter Notebook, CSV Data, Flask/Streamlit for UI
- **Crop based Recommendation System (2025):** Developed a data - driven system to determine the most suitable crop for cultivation based on specific environmental factors. The core of the project is a machine learning model trained to recognize patterns between crop success and key variables like weather conditions, climate type, soil pH, and temperature.
Tools & Technologies: Python, Pandas, Scikit-learn, NumPy, Jupyter Notebook, CSV Data, Flask/Streamlit for UI, API routing, Html,
- **Rubix Cube Solver (2025):**Engineered a Python-based solver for 3x3 Rubik's Cubes capable of handling any valid scramble. The solution leverages Korf's Algorithm (IDA*) for an efficient search, supported by a custom data structure for optimal cube state representation. This project showcases my ability to implement complex algorithms and heuristics to solve challenging computational problems.
Tools & Technologies: Python, Git/GitHub, Data Structures, Search Algorithms (A*/IDA*), Heuristics

Extra Curricular Activities

- Independently learned and implemented a Full Stack MERN application for personal Portfolio.
- Completed 100 Days of Code at Leetcode
- Volunteer at University Annual Fest Advitya
